

E-commerce Sales Performance Analysis

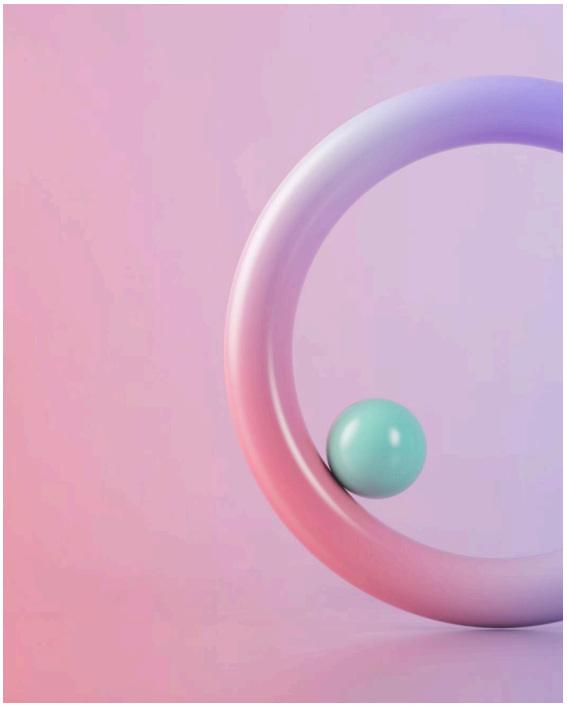

Executive summary

01. Overview

Summarize the project

This project focuses on analyzing an E-commerce Sales Dataset using Tableau. The main objectives are to understand sales performance, identify the top 10 best-selling products based on quantity sold, and analyze sales across different countries.

The analysis includes total orders, monthly revenue trends, country-wise sales performance, and popular products. The dashboard shows a total of 22,062 orders and identifies the United Kingdom as the country generation.This project helps understand customer purchasing behavior, product popularity, and overall business performance, so businesses can make better decisions and improve their sales strategies.

02. Key findings

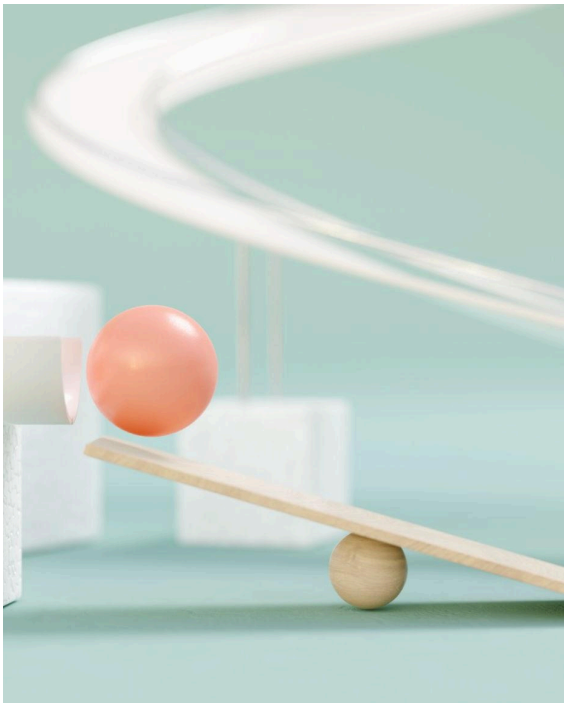

Identify the project's most noteworthy findings

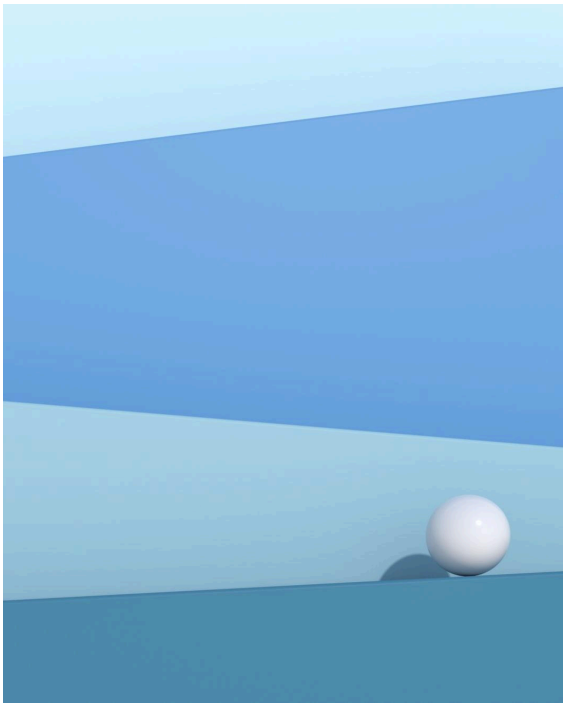

a. Total Project
b. Sales Performance by Country
c. Top 10 best selling product
d. Monthly Revenue

03. Solutions

Document solutions that were developed

a. Focus on Best-selling Products
b. Improve sales in different countries
c. Analyze monthly Revenue Trends

04. Impact

a. Better Understanding of Sales Performance
b. Improved Business Decision-making
c. Better Sales and Revenue Planning

Introduction

01. Background

E-commerce has become an important part of modern business. Many companies sell their products online and generate a large amount of sales data every day. This data helps businesses understand customer purchasing behavior, product performance, and sales trends. This project focuses on analyzing an e-commerce sales dataset using Tableau to understand sales performance across different countries, identify the top 10 best-selling products, and analyze monthly revenue trends.

02. Objectives

a. identify the Top 10 best-selling product based on quantity
b. Analyze Sales Performance across different countries
c. Explore Monthly Revenue Trends

03. Problem

E-commerce Businesses generate a large amount of sales data, making it difficult to understand sales performance ,identify best-selling products and trek revenue trends. This project aims to solve this problem through data analysis and visualization using tableau.

Recommendations

1. Maintain sufficient stock of best-selling products .
2. Use better marketing strategies to improve sales in different countries .
3. Analyze monthly revenue trends to plan future sales.

01. Impact of recommendation

SOLUTION	EFFECTIVENESS	IMPACT	NOTES
Best-Selling products	high	Better product availability	Maintain stock according to customer demand
Country-wise sales	high	Improved sales	Use better marketing strategies
Monthly revenue analysis	high	Better sales planning	Review monthly sales regularly

Analysis

01. Research methods

This project uses a quantitative research method based on secondary data. The e-commerce sales dataset was downloaded from Kaggle and analyzed using Tableau to understand sales performance and customer purchasing patterns.

02. Approaches used

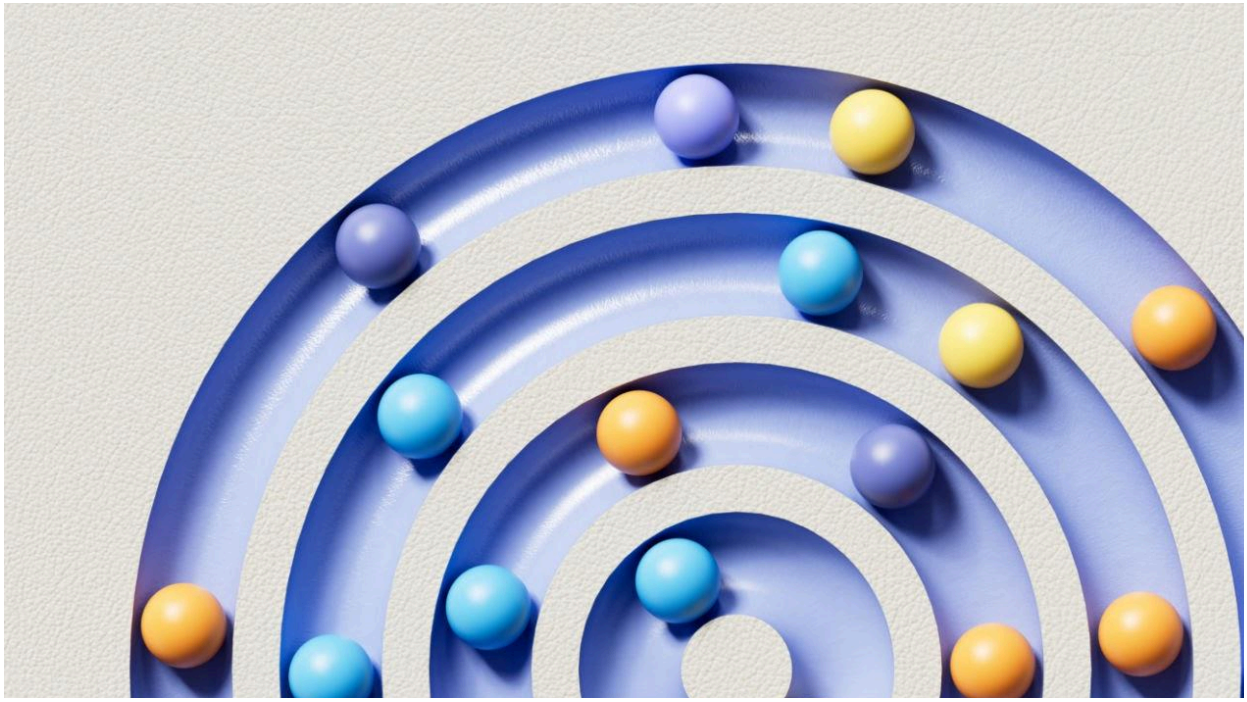

Tableau was used to analyze and visualize the sales data. The analysis includes total orders, country-wise sales performance, the top 10 best-selling products, and monthly revenue trends.

03. Relevant facts and information

Present key facts

a. Total Orders: 22,062
b. Highest Sales Country: United kingdom
c. Top 10 Best selling products Identify through tableau analysis.
d. Monthly Revenue Trends : Analyzed to understand sales patterns throughout the year.

Conclusion

01. Summary of findings

This project analyzed e-commerce sales data using Tableau. The analysis identified the top 10 best-selling products, compared sales performance across different countries, and examined monthly revenue trends. The findings helped us understand overall sales performance and customer purchasing patterns.

02. Implications of the study

This project helps businesses understand which products sell best, compare sales across countries, and see monthly revenue trends. With this information, they can make better decisions about stock, marketing, and planning.
